

LAUREL Medical Solutions

Pressure Prevention

Laurel Medical Solutions utilizes the Xsensor Foresite pressure mapping system as a basis of our Pressure Prevention Program. We take a comprehensive approach to pressure mapping by evaluating multiple surfaces as our system is equipped with a seat and bed pad.

ForeSite SS (100MMHG)

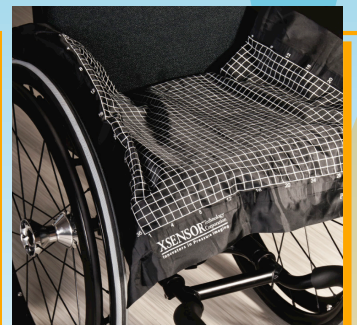

ForeSite SS shows exactly where the pressures are that require relief. With 1296 pressure sensing points, that 5 times as many sensing points as its nearest competitor.

This shows you that pressures are elevated, it shows you precisely what those pressures are so you can be confident in your treatment recommendations.

What We Do

- Pressure map on multiple surfaces
- Provide reporting of findings
- Provide a comparison of products, if required
- Work with wound team to develop a seating and/or laying pressure management program.
